

## Earth Science

### Online Collaboration Assignment

**Objective:** Using an online collaboration tool, your group will create a media-rich resource that you can use to study for your test.

**Instructions:** Your group will use the online collaboration tool Lino ([www.linoit.com](http://www.linoit.com)) to create a media-rich tool to use to study for your test. You will appoint a group leader that will create the group, create the Lino board, and invite all participants to collaborate. You will receive instructions in class about how to do this.

Items to consider:

- Your goal should be to create a tool you could actually use to study
- You MUST use your @corbat.com email address to sign up for Lino
- You MUST invite me ([jcorbat@corbat.com](mailto:jcorbat@corbat.com)) to join your group and collaborate on your board
- Get creative! This is meant to be a media-rich, visually pleasing study tool
- Lino cannot pull images directly from a website; you will have to save the image to the computer first
  - Don't forget to delete the image when you're done with it!
